

Figure 1

**Figure 2:** Agarose gel-separated PCA3 RT-PCR products amplified from tissue biopsies of 6 prostate cancers (upper row) and 4 benign prostate hyperplasias (BPH, lower row). Positive control: LNCaP cells; negative control : water. Size marker: 100 bp ladder.

**Figure 3 :** Sequences of RT-PCR amplified PCA3 using PCR primers located in exon 3 and exon 4a. Primer sequences are shown in bold letters. Capital letters represent nucleic acids common to both sequences.
